Claim 7; Page 18; 34pp; English.

The present invention relates to anti-angiogenesis peptides from a portion of a selected from plasminogen, endostatin, VEGF or FLT-1. The invention is used to prevent or treat primary tumour growth or metastasis or undesired angiogenesis

The invention discloses a peptide comprising a portion of a protein e.g. plasminogen, endostatin (Endo-1-4), vascular endothelial growth factor (VEGE), FIL-1 or kinase insert domain containing receptor/FLK-1. These peptides are able to act as potent angiogenic inhibitors (Angio-1-5) inhibiting endothelial cell proliferation and retarding tumour growth. Angiogenesis is the process of new blood vessel formation from precessing the structures. It plays an important on in migration and assembly into tubule structures. It plays an important role in normal physiological functions such as embryonic development and wound healing. Inappropriate angiogenesis is also associated with various pathological conditions including tumour growth and metastasis, rheumatoid arthritis and psoriasis. Anticancer therapy by inhibiting tumour angiogenesis is called antiangiogenic therapy and pharmacological and pharmacological and pharmacological such these interactions. The peptides are useful for preventing or treating undesired angiogenesis and primary tumour growth or metastasis. The sequences presented in ABG97510-ABG97559 are examples of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Endostatin; angiogenesis; cancer; tumour; rheumatoid arthritis; psoriasis; ocular; Osler-Webber Syndrome; myocardial; telangiectasia; plaque neovascularisation; haemophiliac joint; angiofibroma; inhibitor; wound granulation; intestinal adhesion; atherosclerosis; scleroderma; hypertrophic scar; cat scratch disease; Rochele minalia quintosa; Helicobacter pylori ulcer; birth control; collagen alpha type XVIII.
                                                                                                                                                                                                                                                                                                                                                                                                                         Novel peptide for preventing/treating undesired angiogenesis, has a portion of a protein e.g. plasminogen, endostatin, and potent antiangiogenic activity and endothelial cell proliferation inhibition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               100.0%; Score 66; DB 5; Length 13; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            undestrable angiogenesis. Angiogenesis is the process of new blood vessel formation from pre-existing vessels. Inappropriate angiogenesis is associated with various pathological conditions including solid tumour growth and metastasis. The present peptide can be used to to prevent tumour metastasis or inhibit the growth of a primary tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptides having potent anti-angiogenic activity, useful for the treatment of tumors, comprise a portion of a FLT-1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Anglogenesis; plasminogen; endostatin; Endo-; VEGF; vascultar endothabial growth factor; FLT-1; kinase insert domain; FLK-1; vascultar endothabial growth factor; FLT-1; kinase insert domain; FLK-1; anglogenic inhibitor; Anglo-; endothabial cell; proliferation; tumour growth; blood vessel formation; migration; tubule structure; embryonic development; wound healing; tumour metaetasis; rheumatoid arthritis; psoriasis; anticancer; therapy; antianglogenic therapy; mitogen; tyrosine kinase receptor.

The present sequence represents the first confidential amino acid sequence. The present sequence corresponds to an incernal 20 amino acid fragment found in mouse collagen alpha type XVIII starting at amino acid fragment found in mouse collagen alpha type XVIII starting at amino acid fragment found in human alpha I type XVIII starting at amino acid fragment found in human alpha I type XVIII starting at amino acid fragment found in human alpha I type XVIII starting at amino acid fragment found in human alpha I type XVIII starting at amino acid 1132 and ending at amino acid 1151. Endostatin can be isolated from murine hemangioendothelioma. The endostatin can be used to treat angiogenesis related diseases, e.g. angiogenesis dependent cancers, benign tumours, rheumatoid arthritis, psoriasis, cular angiogenesis benign tumours, rheumatoid arthritis, psoriasis, cular angiogenesis of diseases, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, intestinal adhesions, atherosclerosis, scleroderma, wound granulation, intestinal adhesions, atherosclerosis, scleroderma, Helobacter pylori ulcers. The endostatin can also be used to prevent embryo implantation, i.e. in birth control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mouse; endothelial cell proliferation inhibitor; collagen XVIII; angiogenesis inhibitor; anti-tumour; cytostatic; antipsoriatic; assotropic; determatological; ophthalmological; vulnerary; antiarteriosclerotic; antidiabetic; haemostatic; contraceptive; ocular angiogenic disease; ahterosclerosis; scleroderma; myocardial angiogenesis; telangiectasia; angiofibroma; wound granulation.

specific procedulations of endomination of the sequence corresponds to a C-terminal fragment of newly identified collagen type XVIII. Recombinant mouse endostatin (20 mg/kg) was administered subcutaneously to mice implanted with Lewis lung carcinomas. There was tumour mass regression non-detectable levels after 12 days of therapy due to the anglogenesis inhibitory activity of endostatin. Thus the protein is useful for treatment of anglogenesis-dependent cancers. The polynucleotide and polypeptide sequences of this endostatin are useful for treating and diagnosis of tumours, ocular anglogenic diseases, Obler-Webber syndrom, myocardial anglogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, anglofibroma and wound garanulation, for treatment of diseases related to excessive or abnormal stimulation of endothelial cells e.g. intestinal adhesions atherosclerosis, scleroderma. The protein may also be useful as a birth control agent by reducing or preventing uterine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel endostatin capable of inhibiting endothelial cell proliferation and angiogenesis, useful for treating angiogenesis-dependent cancers and as birth control agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 vascularisation. The gene for endostatin may be isolated from cells or tissue that express high levels of endostatin, eg. tumour cells, by generating cDNA from mRNA using reverse transcriptase and then amplifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     psoriasis; scleroderma; Crohn's disease; corneal disease; retinopathy; arthritis; wound healing; Helicobacter pylori; peptic ulcer; gene therapy; angiostatin antagonist; endostatin antagonist; antiantiangiogenic; cytostatic; antiarthritic; antiinflammatory; cerebroprotective; antidiabetic; virucide; antipyretic; vulnerary; gynaecological; cat scratch fever.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the N-terminus of an endostatin, a potent and

The invention relates to an isolated mouse endostatin (potent inhibitor endothelial proliferation). Also include are a compound comprising an isolated mucleic acid sequence encoding the endostatin protein (or an isolated mucleic acid sequence encoding the endostatin protein (or an isolated antibody capable of specifically binding to endostatin protein), treating an angiogenesis-related disease, treating angiogenesis-dependent cancer, a method of birth control, a composition comprising angiostatin and making the endostatin protein. The endostatin is useful for preparing a composition for treating an angiogenesis-related disease, e.g. angiogenesis-dependent cancer, psoriasis, wound granulation or atherosclerosis. Microsequence analysis of the 20 kDa inhibitor of capillary endothelial cell proliferation from the conditioned media ceid N-terminal microsequence analysis of the purified inhibitor of capillary endothelial cell proliferation confirmed that it was identical to a C-terminal fragment of the NCI domain. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  haemangioma; leukaemia; metastasis; telangiectasia; psoriasis; scleroderma; pyogenic granuloma; myocardial angiogenesis; plaque neovascularisation; coronary collateral; arteriovenous malformation; ischaemic limb angiogenesis; corneal disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cytostatic; vulnerary; vasotropic; antipsoriatic; dermatological; cardiant; ophthalmological; antidiabetic; antiarthritic; antiulcer; osteopathic; gynaecological; contraceptive; endostatin; sucrose octasulfate; angiogenesis inhibitor; endostatin proliferation inhibitor; endostatin biosynthesis; anti-angiogenic compound; collagen type XVIII; endothelial cell-related disorder; angiogenesis related disease; cancer; endothelial cell-related disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inhibitory fragment of collagen XVIII was named endostatin. The present sequence is the N-terminus of the isolated endostatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         rubeosis; necvascular glaucoma; diabetic retinopathy; retrolental fibroplasia; arthritis; diabetic necvascularisation; macular degeneration; wound healing; peptic ulcer; fracture; keloid; vasculogenesis; haematopoiesis; ovulation; placentation; menstruation;
                                                             New endostatin, useful for preparing a composition for treating an angiogenesis-related disease, e.g. angiogenesis-dependent cancer, psoriasis, wound granulation or atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100.0%; Score 66; DB 7; Length 20; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              individual by administering an angiogenesis regulating composition comprising a tropomyosin binding compound or an actin disrupting compound. The compositions are useful for treating diseases and processes mediated by angiogenesis including haemangioma, solid tumours, blood bourne tumours, leukaemia, metastasis, Crohn's disease, coronary or cerebral collaterals, arthritis, diabetic neovascularisation, macular degeneration, wound healing, Helicobacter related diseases, ovulation, menstruation, and cat scratch fever. The present sequence is a peptide described in the exemplification of the invention

The present invention provides endostatin peptides which can be used in the modulation of angiogenesis. This is useful in the treatment of cancers, inflammation, rheumatoid arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of premarturity, macular degeneration, corneal graft rejection, of premarturity, macular degeneration, corneal graft rejection, retrolental fibroplasia, rubeosis, capillary proliferation in atherosclerotic plaques and osteoporosis. Other angiogenesis-dependent diseases include osler-Webber syndrome, myocardial angiogenesis, plaque neovasculisation, telangiectesia, haemophiliac joints and wound granulation. In addition, the peptides can be used as birth control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a number of peptides derived from endostatin which exhibit antiangingenic activity. These may be used in the treatment of cancer. The present sequence is one of the peptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polypeptides derived from endostatin exhibiting antiangiogenic activity useful for treatment of angiogenesis-dependent tumors.
                                                                                                                 Endostatin peptide comprising at least four endostatin amino acid residues are e.g. angiogenesis inhibitors for treating cancer and diabetic retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        100.0%; Score 66; DB 4; Length 23; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         요
                                                                                                                                                                                                                                                                             The invention describes a composition comprising endostatin and sucrose octasulfate. Also described are: a new endostatin protein, which is a concasulfate. Also described are: a new endostatin protein, which is a concasulfate. Also described are: a new endostatin protein, which is a proliferation; molecular probes for the ribonucleic acid and decorption and translation of endostatin, molecular probes for the ribonucleic acid sequences comprision uncleotide caces in transcription and translation of sustained release anti-angiogenic compounds; nucleic acid sequences comprision nucleotide codons that code for the endostatin serving as sustained release anti-angiogenic compounds; nucleic acid sequences comprision uncleotide codons that code for the endostatin in protein framents; identification of receptors specific for endostatin; comprision of enzymes capable of releasing endostatin in biological fragments; identification of endothelial cell-related diseases and diseases. The composition and measurement of endostatin in biological fluids and tissues. The composition is useful for treating angiogenesis related diseases including cancer, haemangioma, leuksemia, metastasis, telangiectasia, psoriasis, scleroderma, pyogenic granuloma, myocardial angiogenesis, necessis, plaque neovascularisation, cornary collateral, arthritis, diabetic neovascularisation, macular cibroplasia, arthritis, diabetic neovascularisation, macular cibroplasia, hematopoiesis, ovulation, pactures, keloids, vasculogenesis, hematopoiesis, ovulation, placer, fractures, keloids, cornary contains the amino acid sequence of human endostatin N. cornary contains inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                 Composition useful for treating angiogenesis related diseases e.g. cancer comprises endostatin and sucrose octasulfate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Endostatin, antiangiogenic, angiogenesis; human, mouse, chicken, cancer, inflammation, angiogenesis-dependent disease.

Sig-mEndo was introduced into an adenoviral vector is useful for expressing endostatin in a mammalian cell such as an A549 or Hep3B cell. It is useful for treating other diseases and disorders associated with angiogenesis, such as neovascular diseases of the eye, including diabetic retinopathy, cardiovascular disease, arthritis, psoriasis, cerebral ededma and intravascular coagulogathy (Kasabach-Merritt syndroma). The vector inhibits, prevents or destroys the growth of tumours by preventing the formation of blood vessels in tumours, such as lymphoma and leukaemia
                                                                                                                                                                                                                                                                             Mouse; endostatin; antitumour; cytostatic; antiarthritic; antipsoriatic; antidiabetic; ophthalmological; gene therapy; angiogenic inhibitor; adenoviral vector; diabetic retinopathy; cardiovascular disease; arthritis; psoriasis; cerebral oedema; intravascular coagulopathy; lymphoma; leukaemia; sig-mEndo; fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Adenoviral vector for treating tumors and disorders associated with angiogenesis, such as cancer, arthritis, and psoriasis, comprises a DNA sequence encoding an angiogenic inhibitor, particularly endostatin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                      This invention describes a novel preparation which inhibits the proliferation of blood vessel endothelium and prevents the regeneration activity of tumour blood vessels. The preparation can also be used as a biological preparation in the treatment of tumours. This sequence represents the murine endostatin protein described in the invention

```
This invention describes a novel viral gene therapy vector comprising a nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine endostatin and angioagenesis-inhibiting fusions and fragments, where the viral vector is sufficiently attenuated for use in human gene therapy. The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells exvivo and then administered to the patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Murine; immunoglobulin Fc fragment; endostatin; immunofusin; anagiogenesis; inhibitor; cytostatic; antirheumatoid; antiarthritic; antipsoriatic; antidiabetic; ophthalmological; immunosuppressant; vasotropic; vulnerary; treatment; antiarteriosolerosis; tumour; metastasis; atherosolerosis; psoriasis; rheumatoid arthritis; ocular angiogenic disease; diabetic retinopathy; macular degeneration; myocardial angiogenesis; plaque neovascularisation; telangiectasia; wound granulation; keloid scar; gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence is the mouse endostatin. The invention relates to a the mutant endostatin (EM), which has anti-angiogenic activity, and is designated EMI. Compositions comprising EMI or fusion proteins comprising CEMI, are useful for treating diseases characterised by angiogenic activity, such as angiogenesis. General endosterised by angiogenic EMI, are useful for treating diseases characterised by angiogenic comprising cativity, such as angiogenesis, ocular angiogenesis, Osler-Webber Syndrome, myocardial angiogenesis, ocular angiogenesis, Osler-Webber Syndrome, macoratial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, contracted disease, Helicobacter pylori ulcers, dialysis graft vascular access stenosis, contraception and obesity. In particular, the diseases of treatable by EMI comprise cancer, especially renal cancer. The methods provide a means for introducing EMI into mammalian cells via gene therapy, for production of the EMI protein. EMI performs as well as tecombinant production of the EMI protein. EMI performs as well or than whole endostatin. Use of EMI is advantageous for treatment of angiogenic diseases in that increasingly smaller peptides are more potent angiogenic diseases in that increasingly smaller peptides are more potent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Plasminogen, murine, angiostatin, endostatin, gene therapy, vector; anti-angiogenic; attenuation, cytostatic; anti-diabetic; ophthalmology; tumour growth; solid tumour; diabetic retinopathy; retina.

Novel fusion protein of angiostatin or endostatin and an immunoglobulin FC region, useful for treating conditions mediated by angiogenesis, such as rheumatoid arthritis, tumors and macular degeneration.

Example 5; Page 48-49; 68pp; English.

a lighted dequence, an immunoglobulin Errogion, and an angiogenesis inhibitor selected from angiostatin, endostatin, a plasminogen fragment chaving angiostatin activity, a collagen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, consistent tumour metastasis, benign tumours including mediated blood born tumours metastasis, benign tumours including mediated conditions themmandiomas, rheumatoid arthritis, psoriasis, ocular angiogenic diseases e.g. diabbetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental confibroma, rubeosis and Osler-Webber syndrome; myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, or angiofibroma, wound granulation, and excessive or abnormal stimulation of endothelial cells, intestinal cells, atherosclerosis, sclerodermal and hypertrophic scars, i.e. keloid scars. The DNA constructs may be used in the construction of immunofusin murine immunoglobulin Fc fragment The patent discloses a DNA molecule encoding a fusion protein comprising

Patent No. (584205)
CENERAL INCORMATION*
O'RELIDY, Michael
APPLICANT: Folkman, M. Judah
TITLE OF INVENTION: Therapeutic Antiangiogenic Compositions
TITLE OF INVENTION: and Methods
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESSE: Jones & Askew, LLP
STREET: 191 Peachtree, 37th Floor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match 100.0%; Score 66; DB 3; Length 13; Best Local Similarity 100.0%; Pred. Sequence 1, Application US/09315689

Patent No. 6346510

GENERAL INFORMATION:

APPLICANT: FOLKman, Judah

TITLE NOT INVENTION: Therapeutic Antiangiogenic Endostatin Compositions

FILE REFRENCE: 05213-0229

CURRENT APPLICATION UNMER: US/09/315,689

CURRENT FILING DATE: 1999-05-20

NUMBER OF SEQ ID NOS: 6

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 1

LENGTH: 20

TITLE OF INVENTION: Therapeutic Antiangiogenic Compositions
and Methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION NUMBER: US/09/174,381

FILING DATE: 16-Oct-1998

CLASSIFICATION NUMBER: US 08/740,168

FILING DATE: 22-OCT-1996

ATPORNEY/AGENT INFORMATION:

NAME: Warren, William L.

REGISTRATION NUMBER: 36,714

REFERENCE/DOCKET NUMBER: 36,714

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 13, Application US/09938391A
Patent No. 6803211
GENERAL INCORMATION:
TAPLICANT: Pfizer, Inc. and Pfizer Products, Inc.
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR DIAGNOSING AND TREATING DISORDERS
TITLE OF INVENTION: INVOIVING ANGIOGENESIS
TITLE OF INVENTION: INVOIVING ANGIOGENESIS
TITLE REFERENCE: 313.00234/PC10799A
CURRENT APPLICATION NUMBER: US/09/938,391A
CURRENT FILING DATE: 2001-08-24
PRIOR FILING DATE: 2000-08-25
NUMBER OF SEQ ID NOS: 15
SOFTWARE: PatentIn version 3.2
                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

Sequence 1, Application US/09405499;
Patent No. 6764995;
GENERAL INFORMATION:
APPLICANT: O'Reilly, Michael
APPLICANT: O'Reilly, M. Judah
TITLE OF INVENTION: Endostatin Protein and Fragments Thereof
FILE REFERENCE: 05213-0640
CURRENT APPLICATION WUMBER: US/09/405,499
CURRENT FILING DATE: 1999-09-23
NUMBER OF SEQ ID NOS: 3
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 1
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1

```
The present invention relates to anti-angiogenesis peptides from a portion of a selected from plasminogen, endostatin, VEGF or FLT-1. The invention is used to prevent or treat primary tumour growth or metastasis or undesired angiogenesis
                                                                                                                  Anti-angiogenesis; plasminogen; VEGF; vascular endothelial growth factor; FLT-1; tumour; metastasis; cancer.
                                                                                                                                                                                                                                                                                                                                                                        Peptides comprising a portion of a protein selected from plasminogen, endostatin, VEGF, FLT-1 and KDR/FLK-1 are useful for treating primary tumor growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

Angiogenesis is the process of new blood vessel formation from pre-existing vessels. Inappropriate angiogenesis is associated with various pathological proditions including solid tumour growth and metastasis. The present peptide can be used to to prevent tumour metastasis or inhibit the growth of a primary tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptides having potent anti-angiogenic activity, useful for the treatment of tumors, comprise a portion of a FLT-1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Angiogenesis; plasminogen; endostatin; Endo-; VEGF; vascular endothabial growth factor; FLT-1; kinase insert domain; FLK-1; angiogenic inhibitor; Angio-; endothelial cell; proliferation; tumour growth; blood vessel formation; migration; tubule structure; embryonic development; wound healing; tumour metastasis; rheumatoid arthritis; psoriasis; anticancer; therapy; anticancer; antiangiogenic therapy; mitogen; tyrosine kinase receptor.

The invention discloses a peptide comprising a portion of a protein e.g. plasminogen, endostatin (Endo-1-4), vascular endothelial growth factor (VEGE); FIL-1 or kinase insert domain containing receptor/FEK-1. These peptides are able to act as potent angiogenic inhibitors (Angio-1-5) inhibiting endothelial cell proliferation and retarding tumour growth. CC Angiogenesis is the process of new blood vessel formation from precessing the process of new blood vessel formation from precessing the process of new blood vessel formation from precessing the total structures. It plays an important role in normal physiological functions such as embryonic development and wound healing. Inappropriate angiogenesis is also associated with various pathological conditions including tumour growth and metestasis, rheumatcid arthritis and psoriasis Anticancer therapy by inhibiting tumour angiogenesis is called antiangiogenic therapy by inhibiting tumour angiogenesis is that functions through two high affinity tyrosine kinase receptors, FLT-1 and FLK-1 (not defined). Protein-protein interactions are crucial to many physiological undesired angiogenesis and the peptides disclosed interafing undesired angiogenesis and primary tumour growth or metastasis. The sequences presented in ABG97510-ABG97559 are examples of

the modulation of anglogenesis. This is useful in the treatment of cancers, inflammation, rheumatoid arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of vessels such as diabetic retinopathy, neovascular glaucoma, retinopathy of prematurity, macular degeneration, corneal graft rejection, retrolental fibroplasia, rubeosis, capillary proliferation in atheroselerotic plaques and osteoporosis. Other anglogenesis-dependent diseases include Osle-Webber syndrome, myocardial anglogenesis, plaque neovasculisation, telangiectasia, haemophilac joints and wound granulation. In addition, the peptides can be used as birth control
                                                                          Endostatin; antiangiogenic; angiogenesis; human; mouse; chicken; cancer; inflammation; angiogenesis-dependent disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides endostatin peptides which can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Endostatin peptide comprising at least four endostatin amino acid residues are e.g. anglogenesis inhibitors for treating cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score 39; DB 4; Length 48;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated mucieic acid comprising any one or the following an interest sequences given in the specification where expression of the nucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense continuous properties or its fragment whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated continuous continuous cardinal continuous cardinal continuous cardinal continuous cardinal continuous cardinal 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                       New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published_pct_sequences

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABMISTAGE cancode the human ORFX proteins given in ABPO0010 to ABPISTO. ORFX proteing are useful for reating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a squences can be used in gene therapy. ORFX sequences can be used in gene therapy. ORFX sequences can be used in the sequences can be used in gene therapy. ORFX sequences can be used in the squences can be used in gene therapy. ORFX sequences can be used in the squences can be used in gene therapy. ORFX sequences can be used in the sequences can be used in the securation to cardiovascular disorders, disorders nearly the corganisms, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenrative disorders, disorders related to organ transplantation, cardiovascular diseases, diabetes mallitus, systemic truchmmune disorders such as multiple sclerosis, rheumatoid diseases, and autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eve disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bene degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from systemic cytokine damage. N.B. The sequence date for this patent did not form part of the printed specification, but was obtained in electronic form at directly from WIPO at fip.wipo.int/published_pot_gequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gene clone of inhibitory factor for hyperplasia of inner blood vessel cells in human body's real tumor, and its use in anti-tumor blood vessel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Endostatin; murine; proliferation; blood vessel endothelium; regeneration; tumour; blood vessel; treatment; amplification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis; hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis; myasthenia gravis.
                                                                                                                                                                                                                                                                                                                              The present invention describes a number of peptides derived from endostatin which exhibit antiangiogenic activity. These may be used in the treatment of cancer. The present sequence is one of the peptides of the invention
                                                                                                                                                                                                                     Polypeptides derived from endostatin exhibiting antiangiogenic activity useful for treatment of angiogenesis-dependent tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel human polypeptides and polynuclectides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 39; DB 4; Length 50;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            activity, such as not ceating unsease intracterists by autogenic activity, such as not openesis dependent cancers, benign tumours, rheumatoid arthritis, psoriasis, ocular angiogenesis, obler Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectesia, haemophiliac joints, angiofibroma, wound granulation, intestinal adhesions, atherosclerosis, scleroderma, hypertrophic scars, cat scratch disease, Helicobacter pylori ulcers, dialysis graft vascular access stenosis, contraception and obesity. In particular, the diseases treatable by EMI comprise cancer, especially renal cancer. The methods provide a means for introducing EMI into mammalian cells via gene therapy, for production of EMI via recombinant means, as well as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence is the mouse endostatin. The invention relates to a the mutant endostatin (EM), which has anti-angiogenic activity, and is designated EM1. Compositions comprising EM1 or fusion proteins comprising EM1, are useful for treating diseases characterised by angiogenic

                     This invention describes a novel preparation which inhibits the proliferation of blood vessel endothelium and prevents the regeneration activity of tumour blood vessels. The preparation can also be used as a biological preparation in the treatment of tumours. This sequence represents the murine endostatin protein described in the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel viral gene therapy vector comprising a nucleic acid molecule encoding an anti-angiogenic polypeptide chosen from human or murine andiostatin and angiogenesis-inhibiting fusions and fragments, where the viral vector is sufficiently attenuated for use in human gene therapy. The products of the invention have anti-angiogenic, cytostatic, anti-diabetic and ophthalmological activity. The vector is used in gene therapy for inhibiting tumour growth in humans harbouring a solid tumour. The vector expresses an anti-angiogenic polypeptide. An additional use comprises treatment of diabetic retinopathy, where the anti-angiogenic polypeptide inhibits angiogenesis in the vicinity of the retina. The vector is administered to cells ex vivo and then administered to the patient

The patent discloses a DNA molecule encoding a fusion protein comprising a signal sequence, an immunoglobulin Fc region, and an angiogenesis influitor selected from angiostatin, endostatin, a plasminogen fragment having angiostatin activity, a collagen XVIII fragment having endostatin activity, or combinations of them. The fusion protein (immunofusin) is used to inhibit angiogenesis and to treat diseases or conditions mediated by angiogenesis. Conditions that may be treated include solid tumours, blood born tumours, tumour metastasis, benign tumours including haemangiomas, acoustic neuromas, neurofibromas, trachomas and pyrogenic panniomas, rheumatoid arthritis, psoriasis, ocular angiogenic diseases e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeosis and Osler-Webber syndrome; myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, and excessive or abnormal stimulation of endothelial cells, intestinal cells, atherosclerosis, sclerodermal and hypertrophic scars, i.e. kelodid scars, the DNA constructs may be used in the construction of immunofusin murine immunoglobulin Fc fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel fusion protein of angiostatin or endostatin and an immunoglobulin FC region, useful for treating conditions mediated by angiogenesis, such as rheumatoid arthritis, tumors and macular degeneration.
                                                                                                                                                                                                                                                                                                                                                                                                   Murine, immunoglobulin Fc fragment, endostatin, immunofusin, angiogenesis; inhibitor; cytostatic, antitheumatoid, antiarthritic; antidiabetic; ophthalmological; immunosuppressant; vasotropic, vulnerary, treatment, antiarteriosclerosis; tumour, metastasis; atherosclerosis; psoriasis; rheumatoid arthritis; collar angiogenic disease; diabetic retinopathy; macular degeneration; myocardial angiogenesis; plaque neovascularisation; telangiectasia; wound granulation; keloid scar; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 39; DB 3; Length 184;

This is useful in the treatment of cancers, inflammation, rheumatoid arthritis, chronic articular rheumatism, psoriasis, disorders associated with inopportune invasion of premarturity, macular degeneration, corneal graft rejection, retrolental fibroplasia, rubosats, capillary proliferation in atherosclerotic plaques and osteoporosis. Other angiogenesis-dependent diseases include osler-Webber syndrome, myccardial angiogenesis, plaque neovasculisation, telangiectasia, haemophiliac joints and wound granulation. In addition, the peptides can be used as birth control
                                                                                              Endostatin; antiangiogenic; angiogenesis; human; mouse; chicken; cancer; inflammation; angiogenesis-dependent disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The present invention relates to an adeno-associated viral (AAV) vector comprising a polynucleotide that comprises a nucleic acid segment that encodes a choroidal or ocular neovascularisation inhibitory polypeptide operably linked to a promoter that expresses the segment to produce the polypeptide in a selected mammalian host cell. Such a vector is useful for providing a choroidal or ocular neovascularisation inhibitory polypeptide to a mammal, for use in the therapy of ocular neovascularisation, age-related macular degeneration, retinal neovascularisation, age-related macular degeneration, visual impairment, ocular dysfunction, loss of vision, retinopathy, or blindness in a human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to anti-Vascular Endothelial Growth Factor (VEGF) antibodies that bind to the same epitope as the monoclonal antibody ATCC PTA 1595 and which significantly inhibit VEGF binding to
                                                    Novel adeno-associated viral vector comprising polynucleotide encoding pigment epithelium-derived factor, useful for treating choroidal neovascularization, blindness, loss of vision.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immunogenic composition for the treatment and diagnosis of cancer comprises an anti-VEGF (vascular endothelial growth factor) antibody binding the same epitope as the monoclonal antibody ATCC PTA 1595.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Murine, endostatin, cytostatic, antiproliferative; vascular endothelial growth factor; VEGF; antibody; VEGF2 receptor; cancer; vascularised solid tumour.

CC the VEGF receptor VEGFR2, without inhibiting VEGF binding to the VEGF creeptor VEGFR1. The present sequence is murine endostatin. Endostatin CC may be conjugated onto the anti-VEGF antibodies of the present invention. CC The anti-VEGF antibodies of the present invention are useful for the CC treatment and diagnosis of cancer, especially vascularised solid tumours XX XX SQ Sequence 191 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -i. FUNCTION: Endostatin potently inhibits endothelial cell proliferation and angiogenesis. May inhibit angiogenesis by binding to the heparan sulfate proteoglycans involved in growth factor signaling.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -!- PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.
-!- SIMILARITY: Belongs to the fibril-associated collagens with interrupted helices (FACIT) family.
-!- SIMILARITY: Contains 1 frizzled (FZ) domain.
-!- SIMILARITY: Contains 1 TSP N-terminal (TSPN) domain.
                                                                                                                                                                         SEQUENCE OF 1591-1774 FROM N.A.

F;1-25/Domain: signal sequence #status predicted <SIG>
F;24-225/Region: thrombospondin amino-terminal homologous
F;26-1315/Product: collagen alpha 1(XVIII) chain, short splice form #status predicted <

E.; Bi

```
A, Molecule type: protein
A, Residues: 1591-1610 < ORB>
A, Residues: 1591-1610 < ORB>
A, Experimental source: hemangioendothelium cells
A, Note: inhibite endothelial cell proliferation
C, Comment: Prolines and lysines at the third position of the tripeptide repeating unit lated and subsequently O-glycosylated.
C, Comment: The different splice forms of collagen alpha 1(XVIII) may be involved in periC, Comment: Endostatin is released from collagen alpha 1(XVIII) chain by the action of un ay be useful in treating solid tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A;Map position: 10:41.0

GENERAL INFORMATION:
APPLICANT: Kini, R. Manjunatha
TITLE OF INVENTION: Small Peptides Having Potent Anti-Angiogenic Activity
FILE REFERENCE: 1781-170P

CURRENT FILING DATE: 1999-08-30

EARLIER PILING DATE: 1999-09-04

NUMBER OF SEQ ID NOS: 50

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 31

LENGTH: 14
